a feet

# Thumbnails

Between 20-40 thumbnails

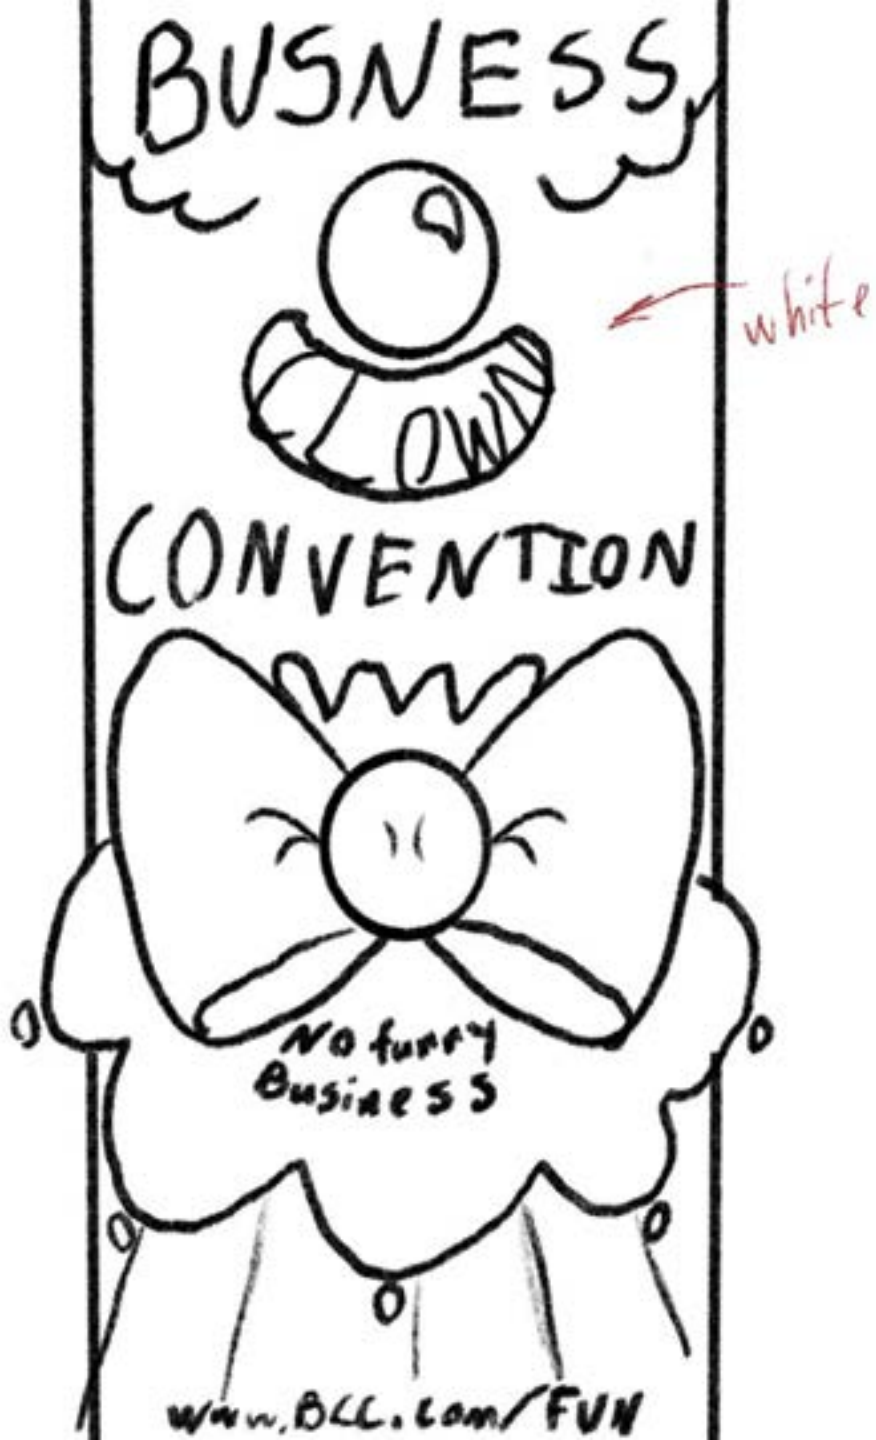

# First round of sketches

Taking the best aspects of each and combine them to make a more refined sketch

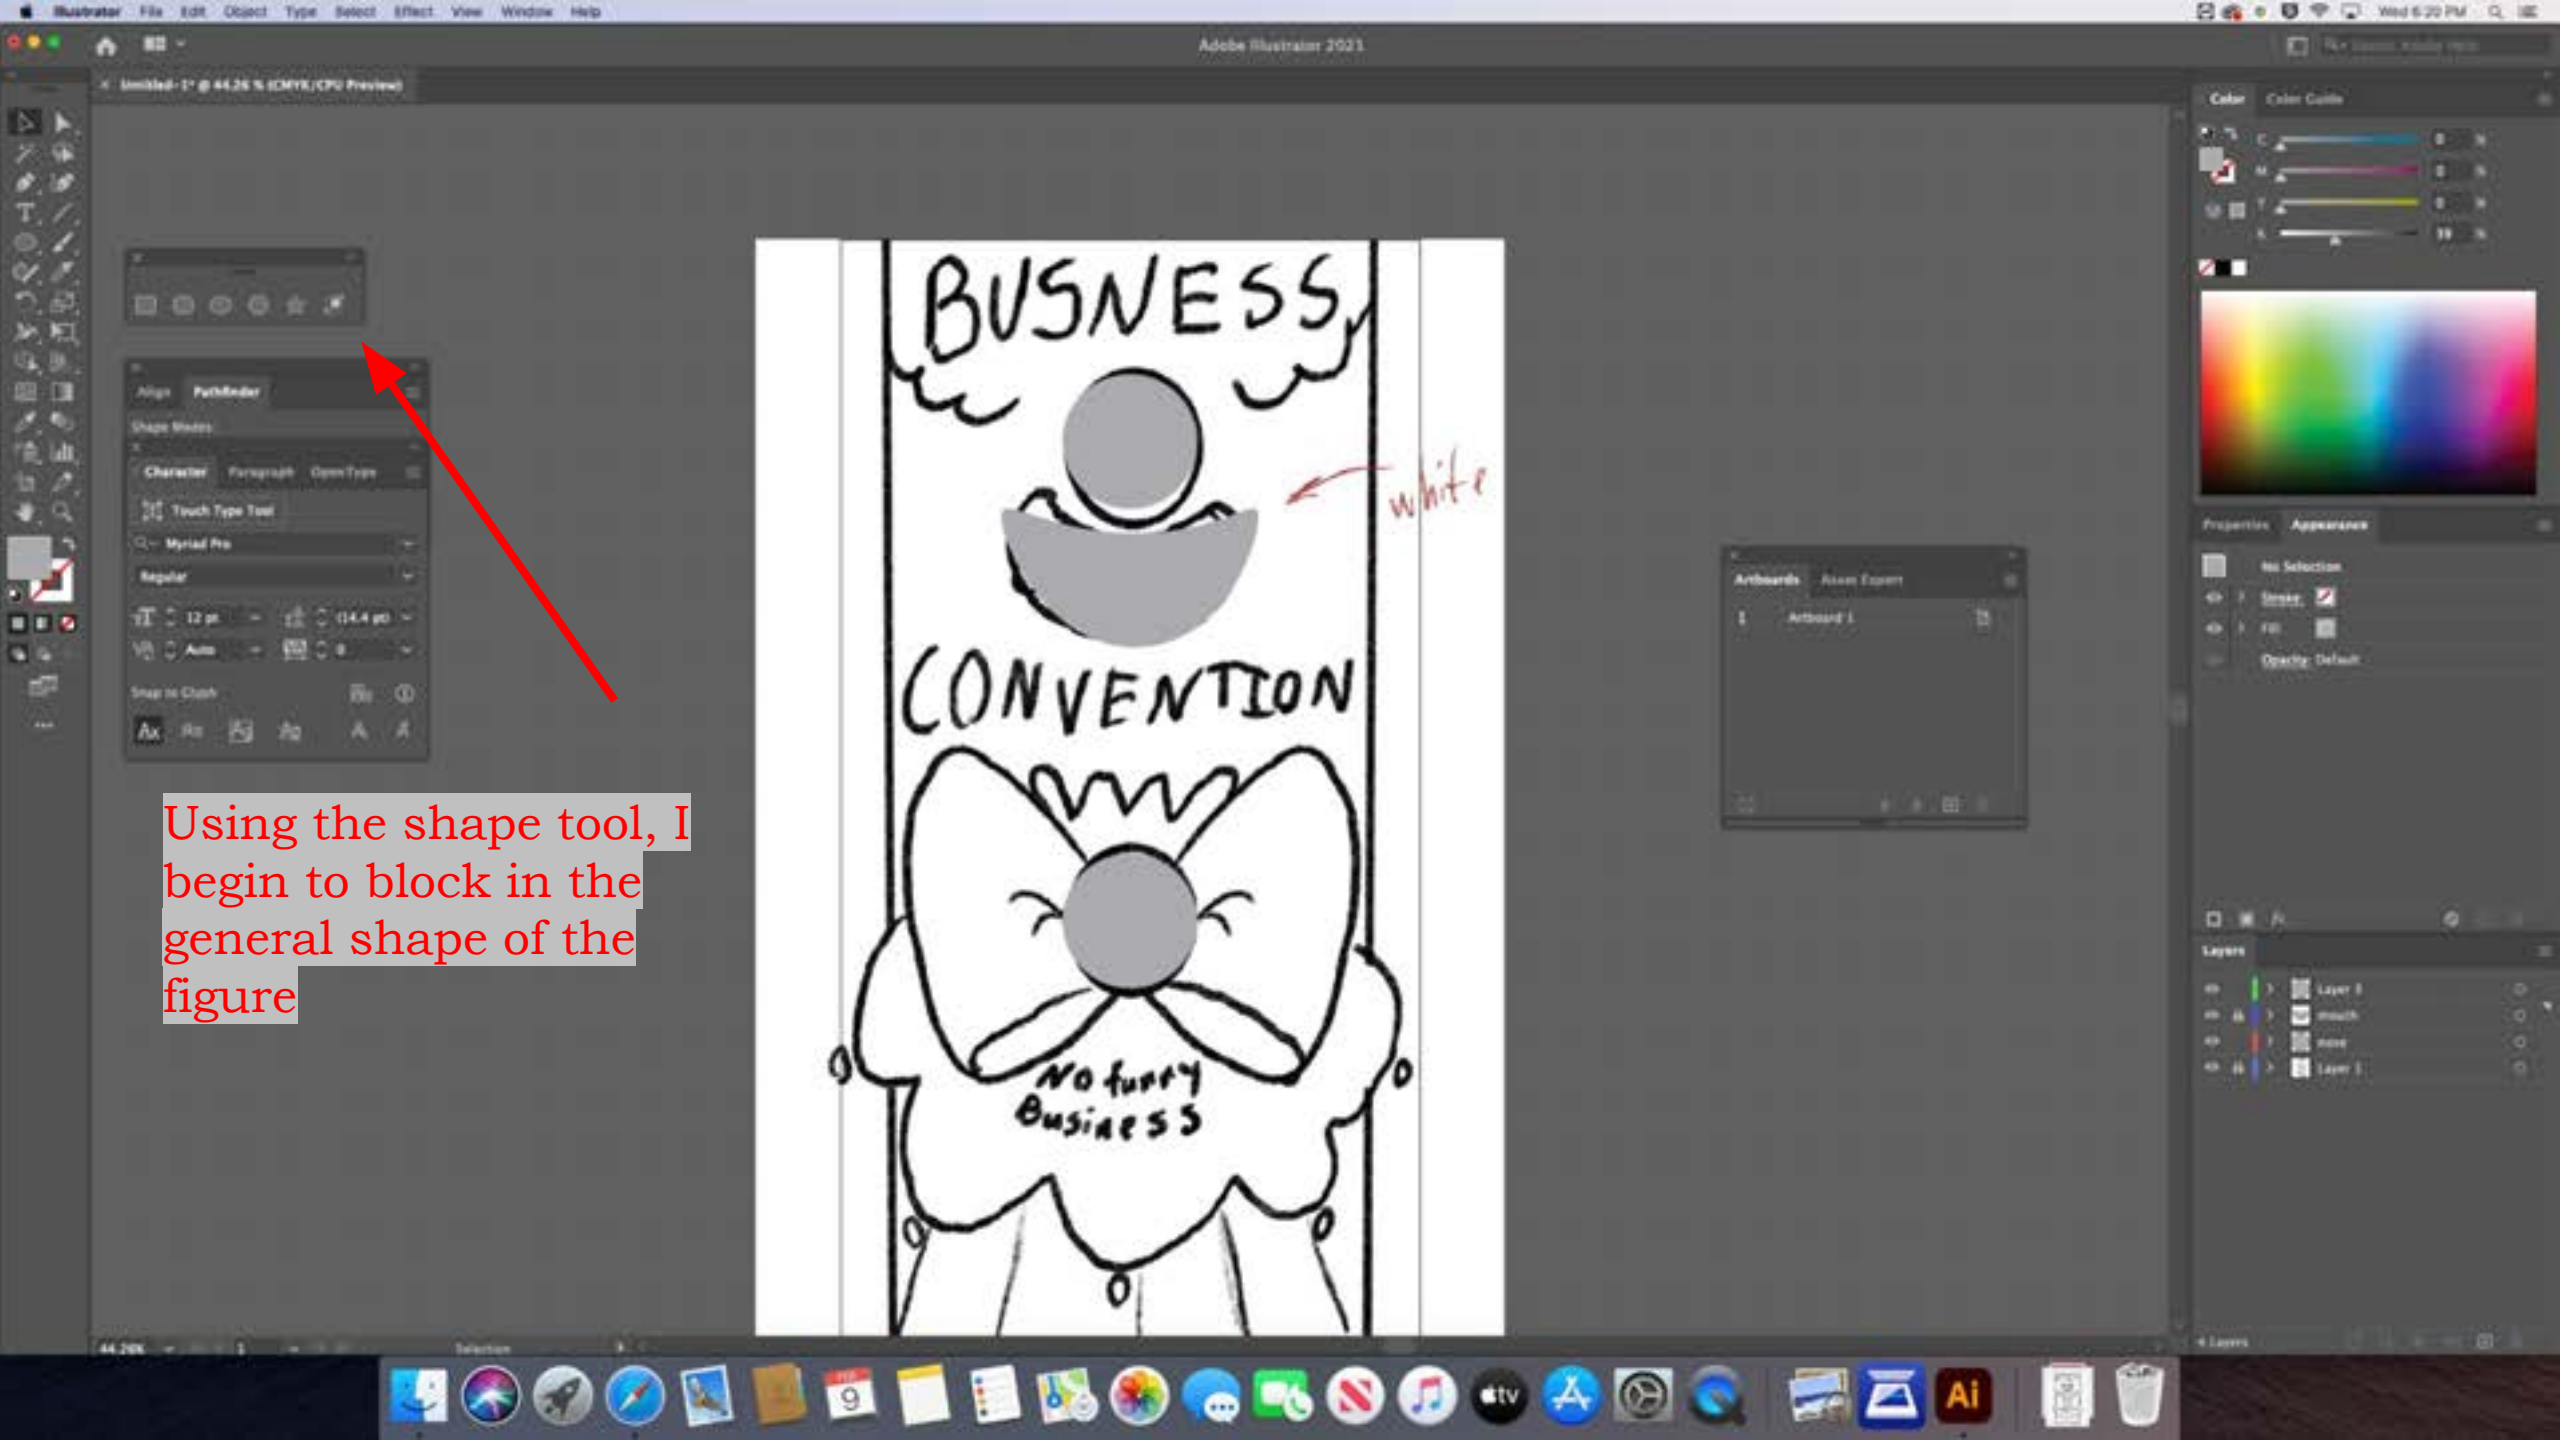

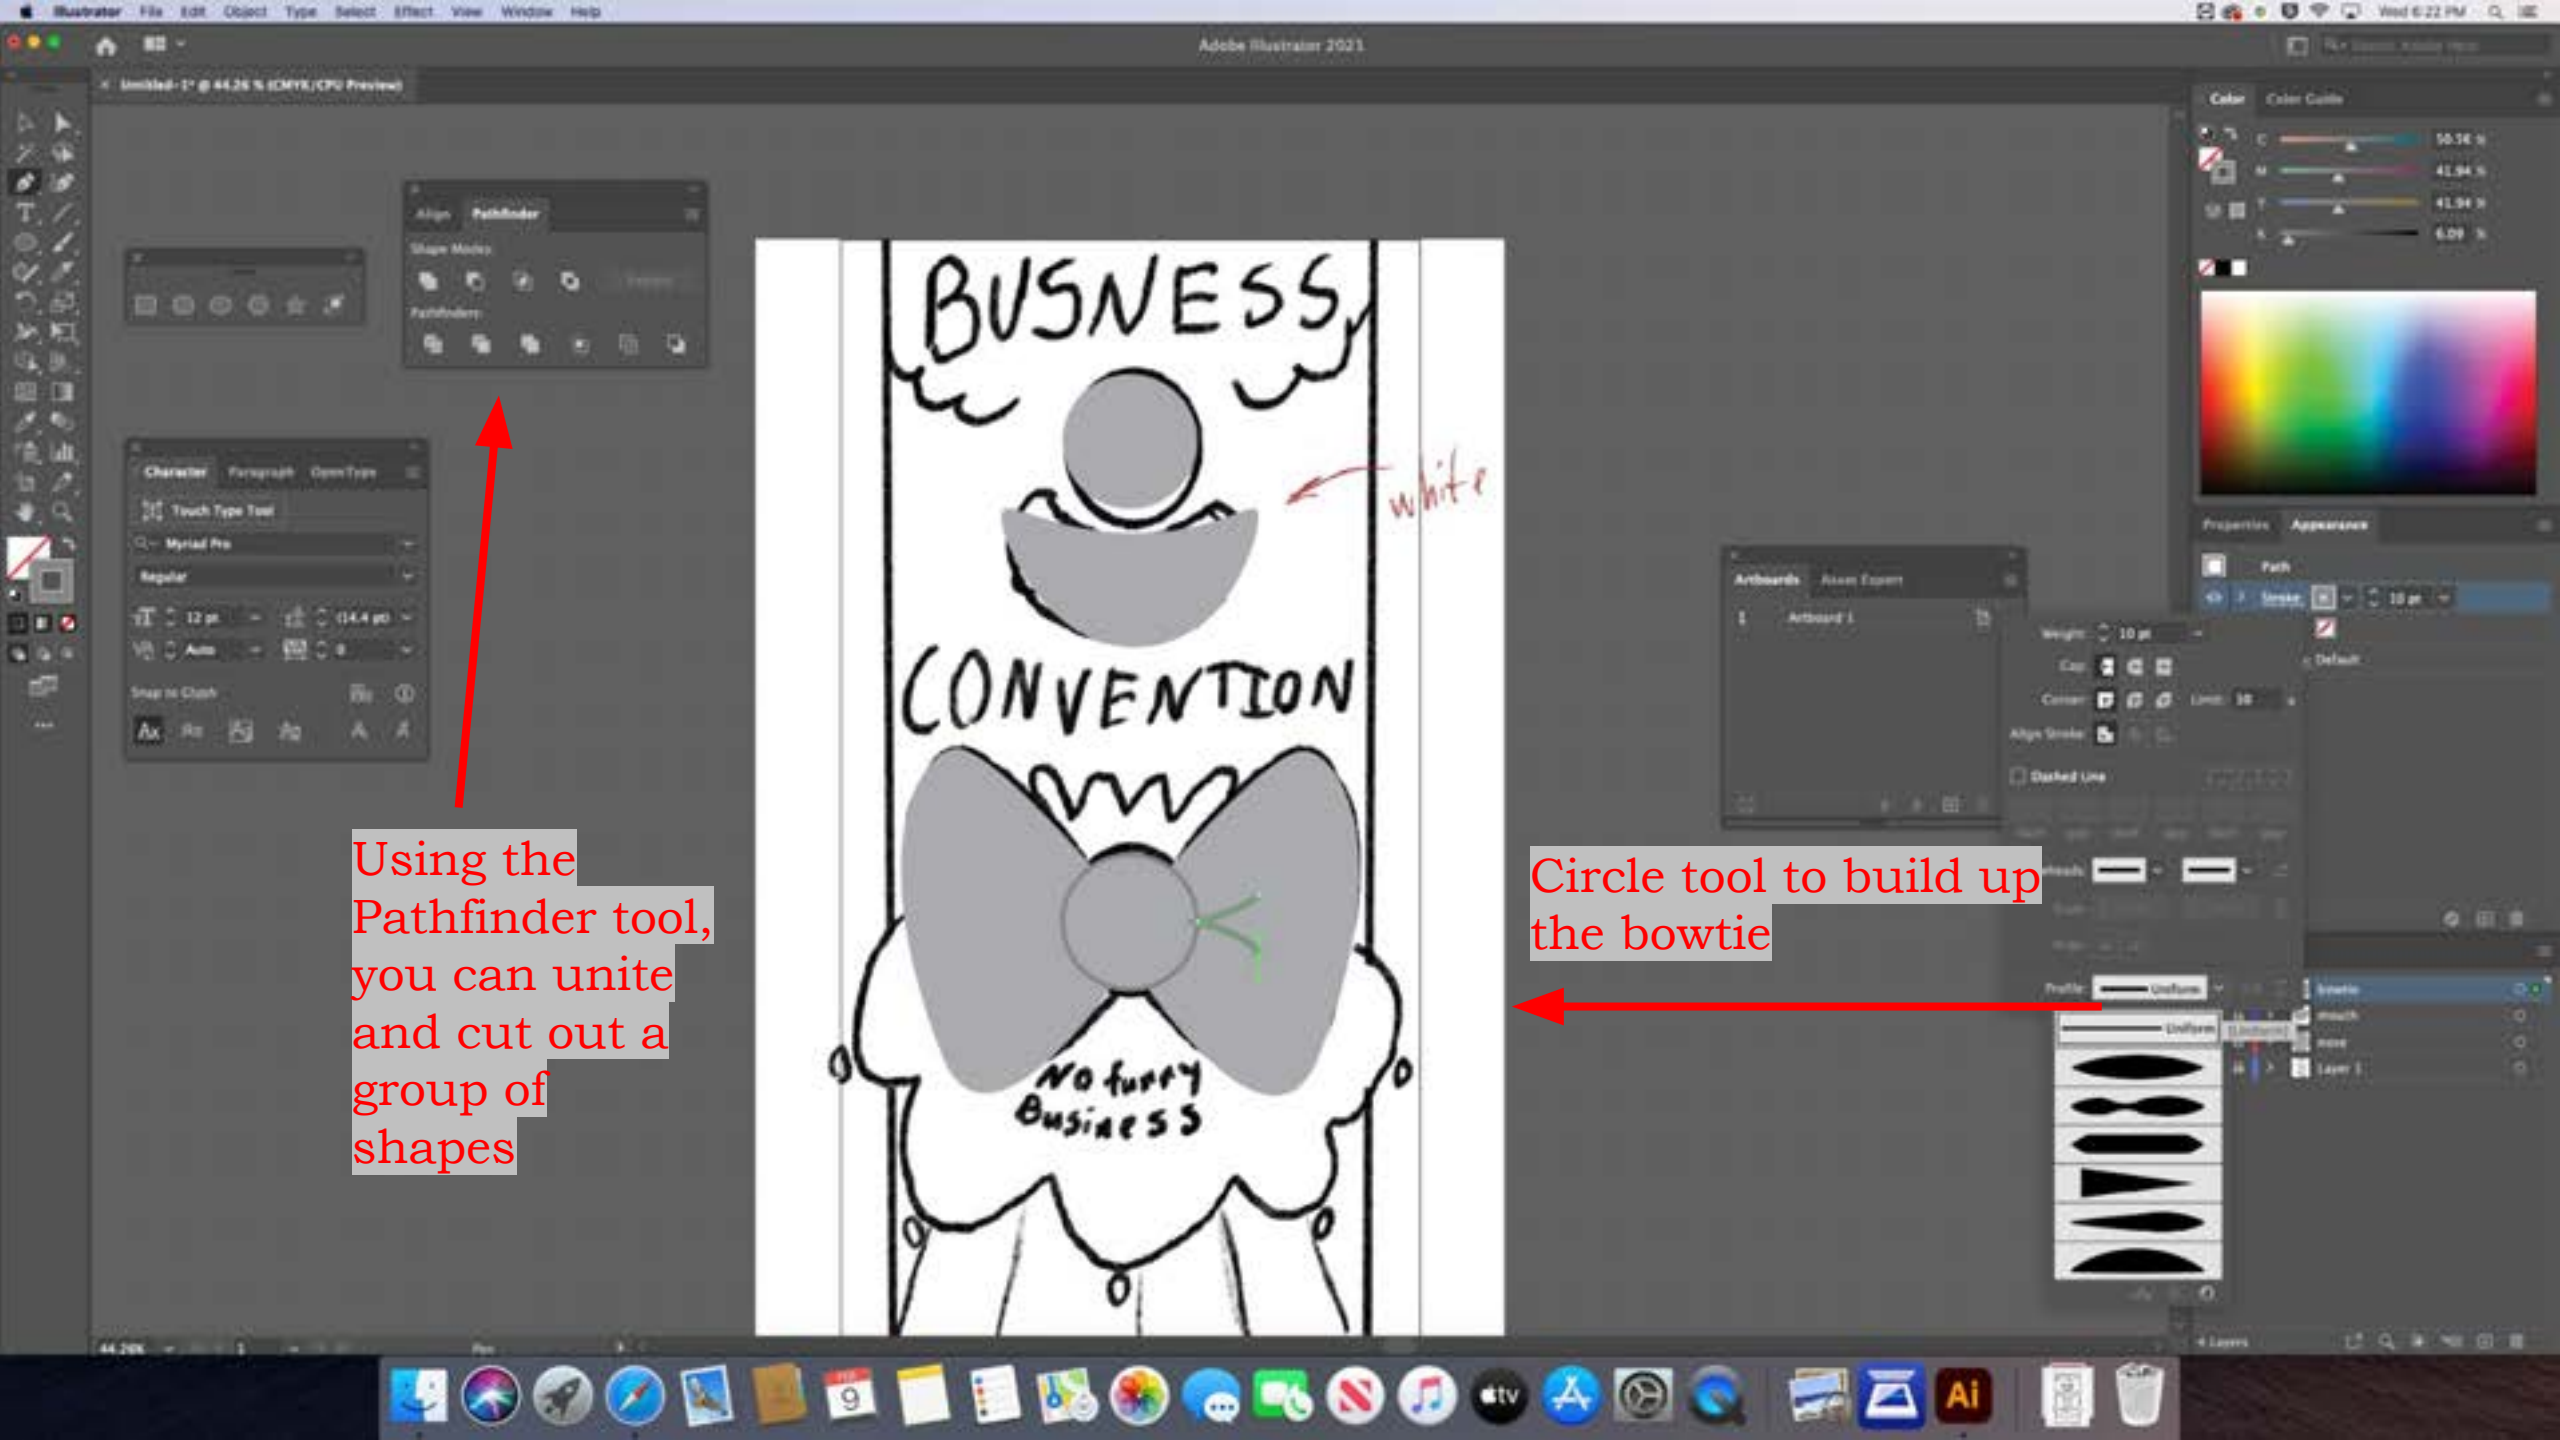

## Final Sketch

Fast outline that can later be traced or place shapes over in Illustrator.

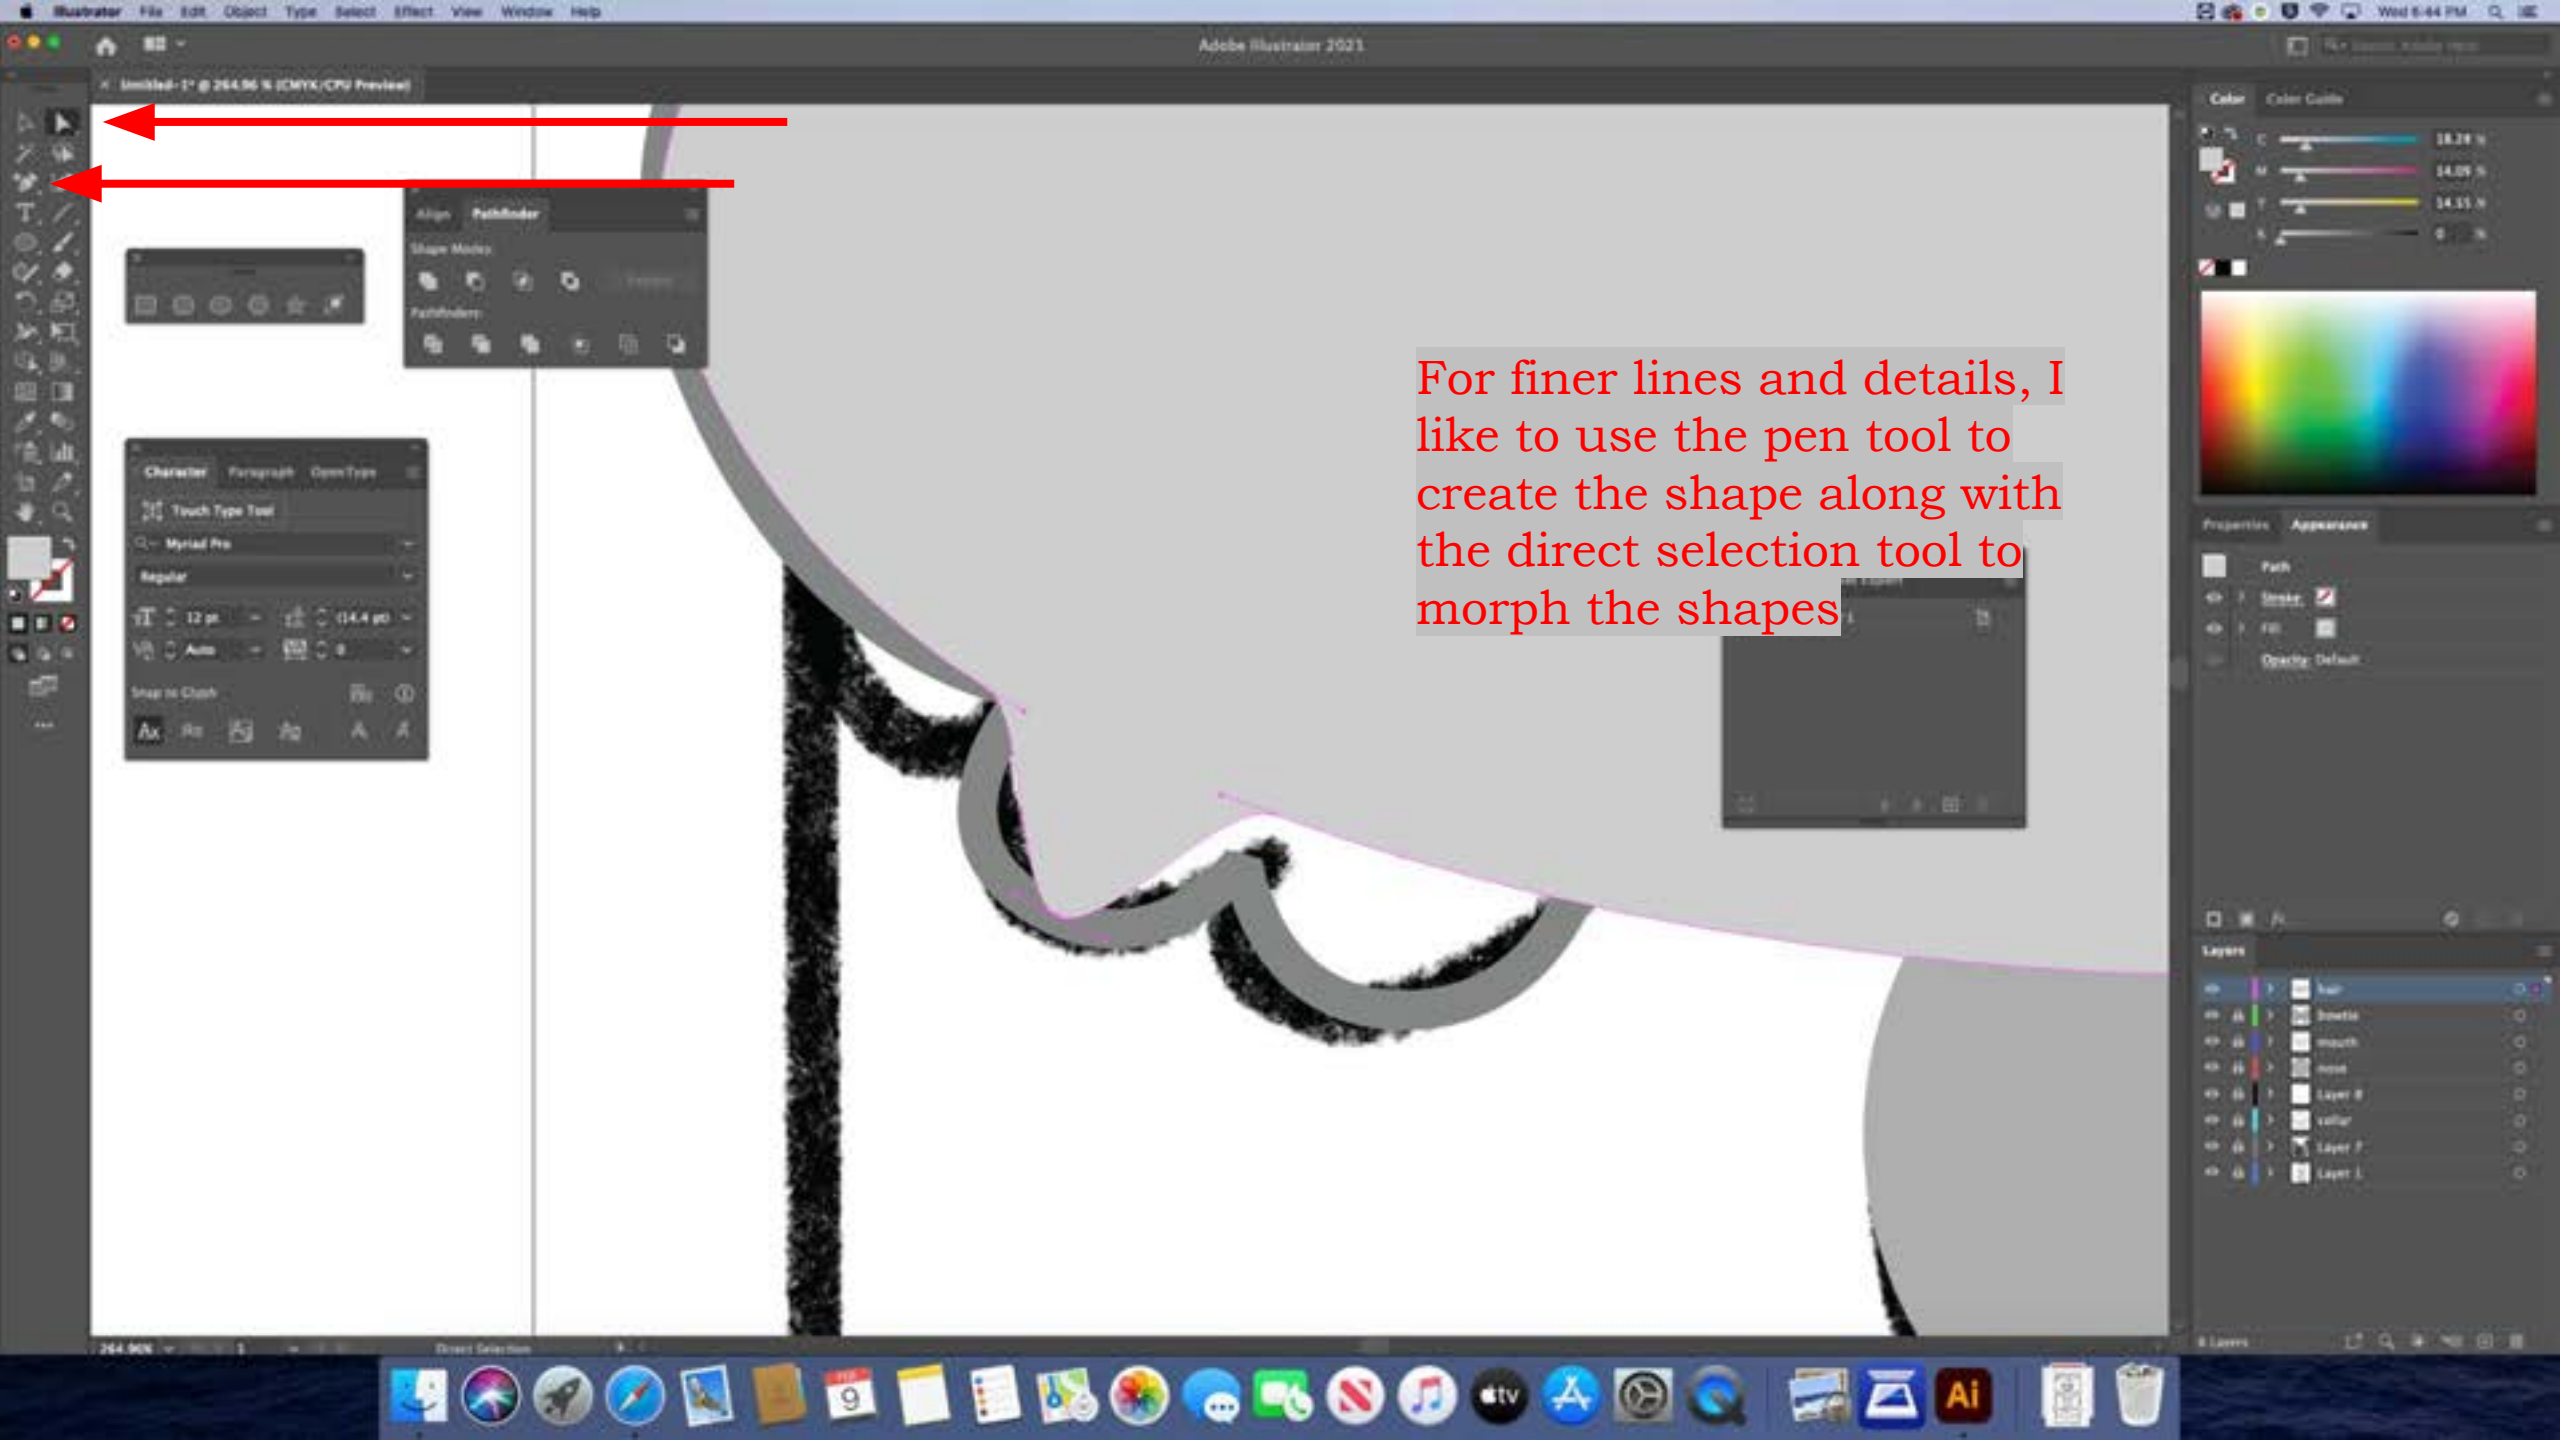

Using the shape tool, I begin to block in the general shape of the figure

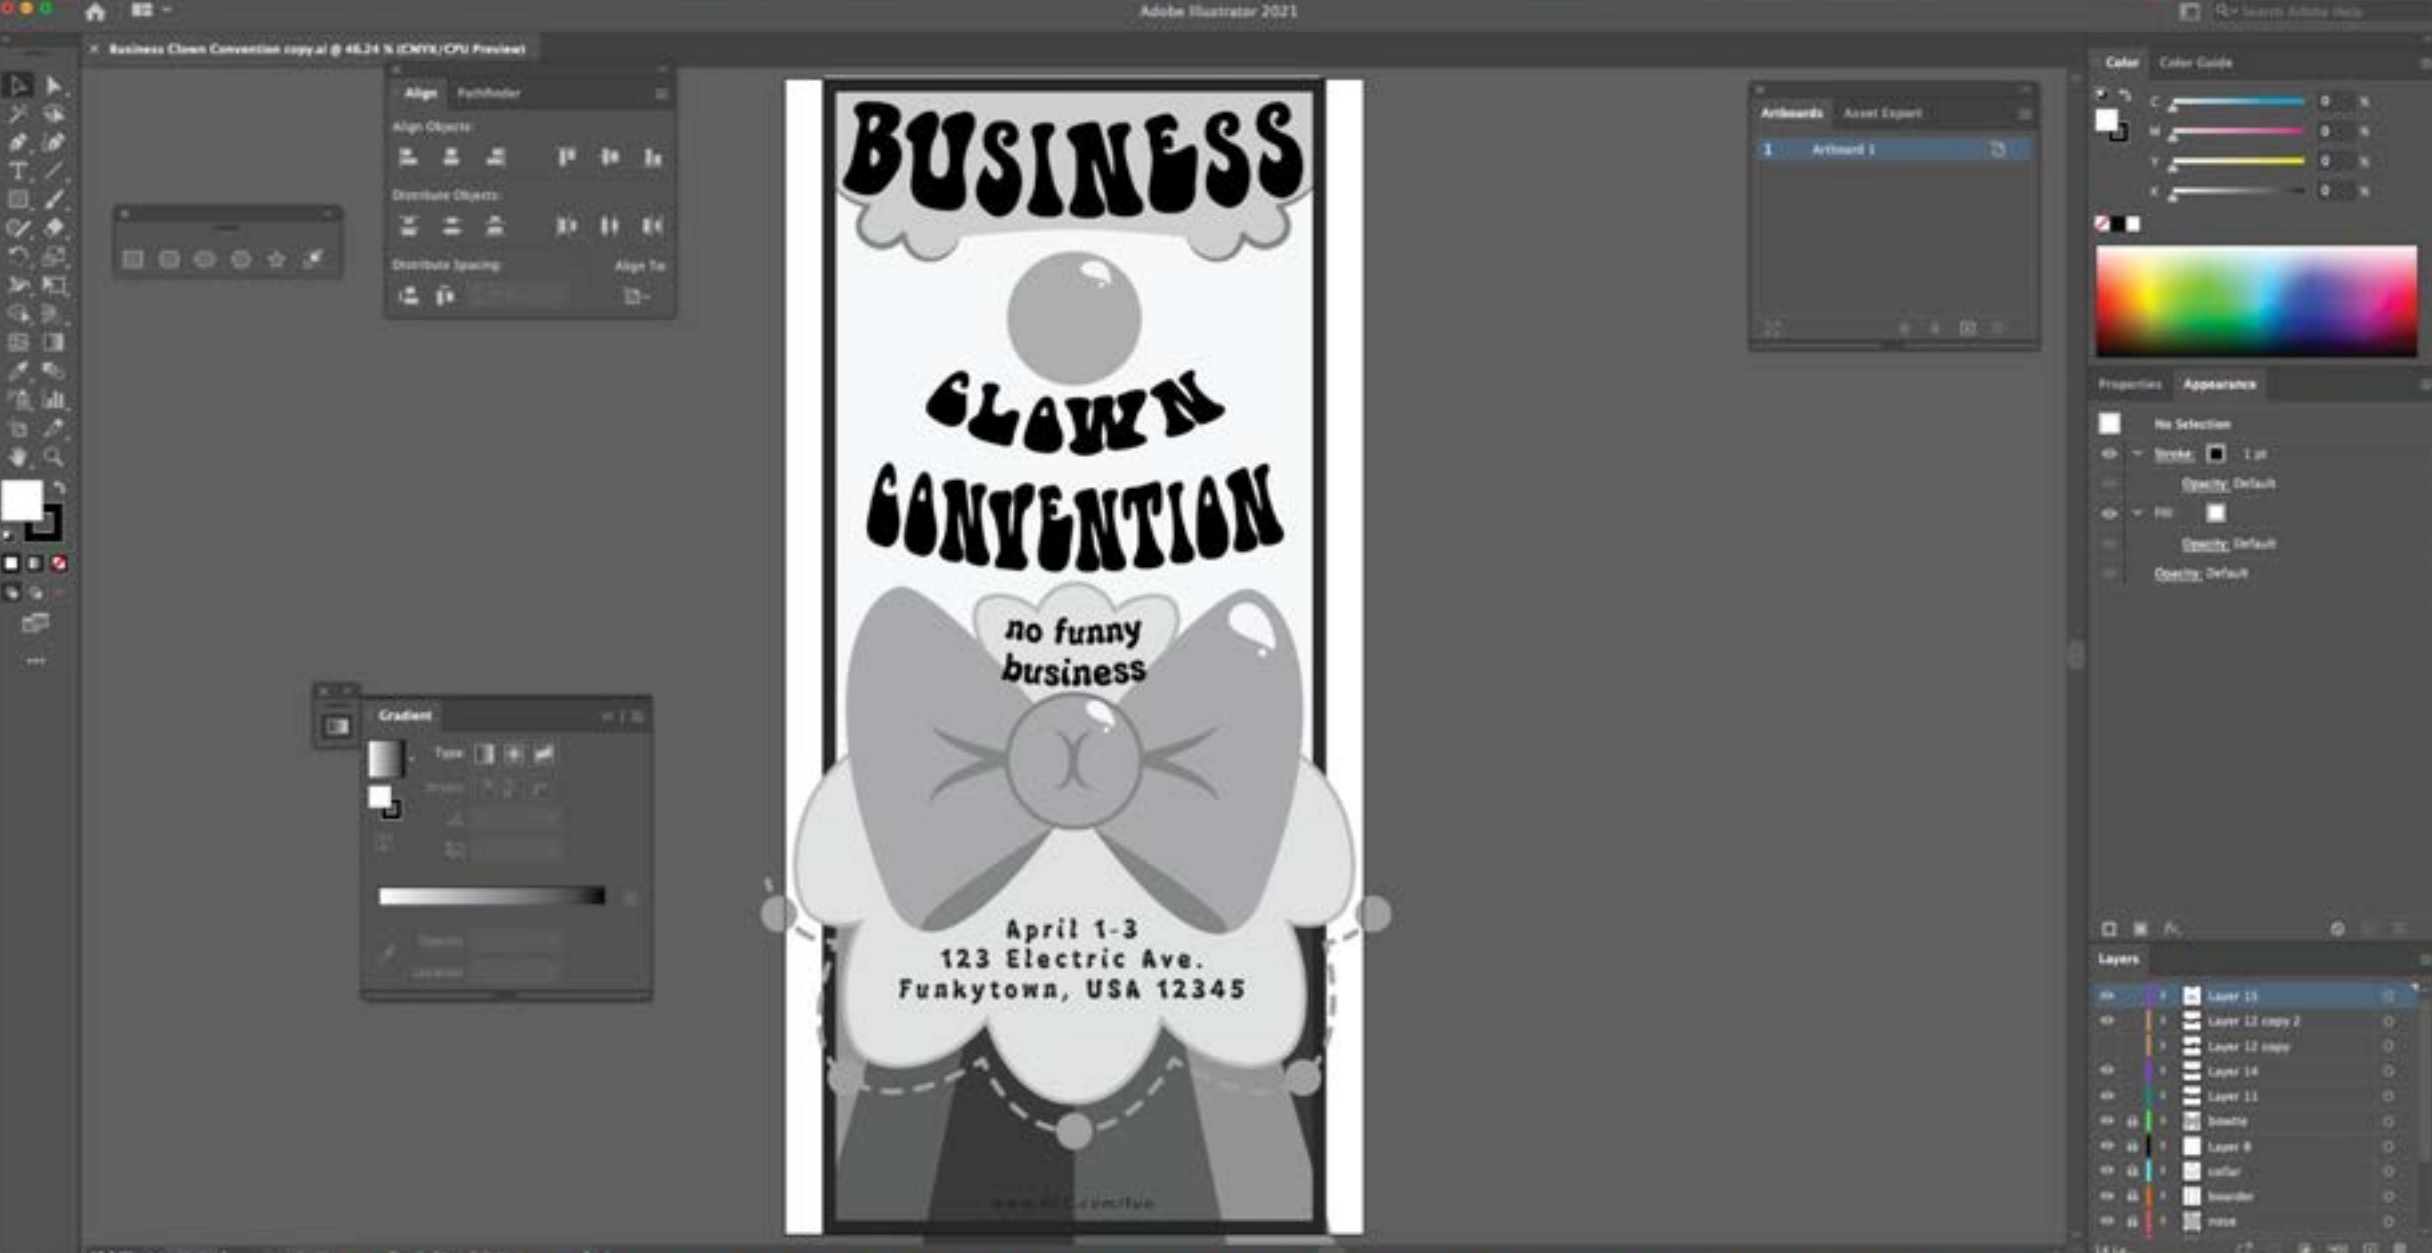

Using the Pathfinder tool, you can unite and cut out a group of shapes

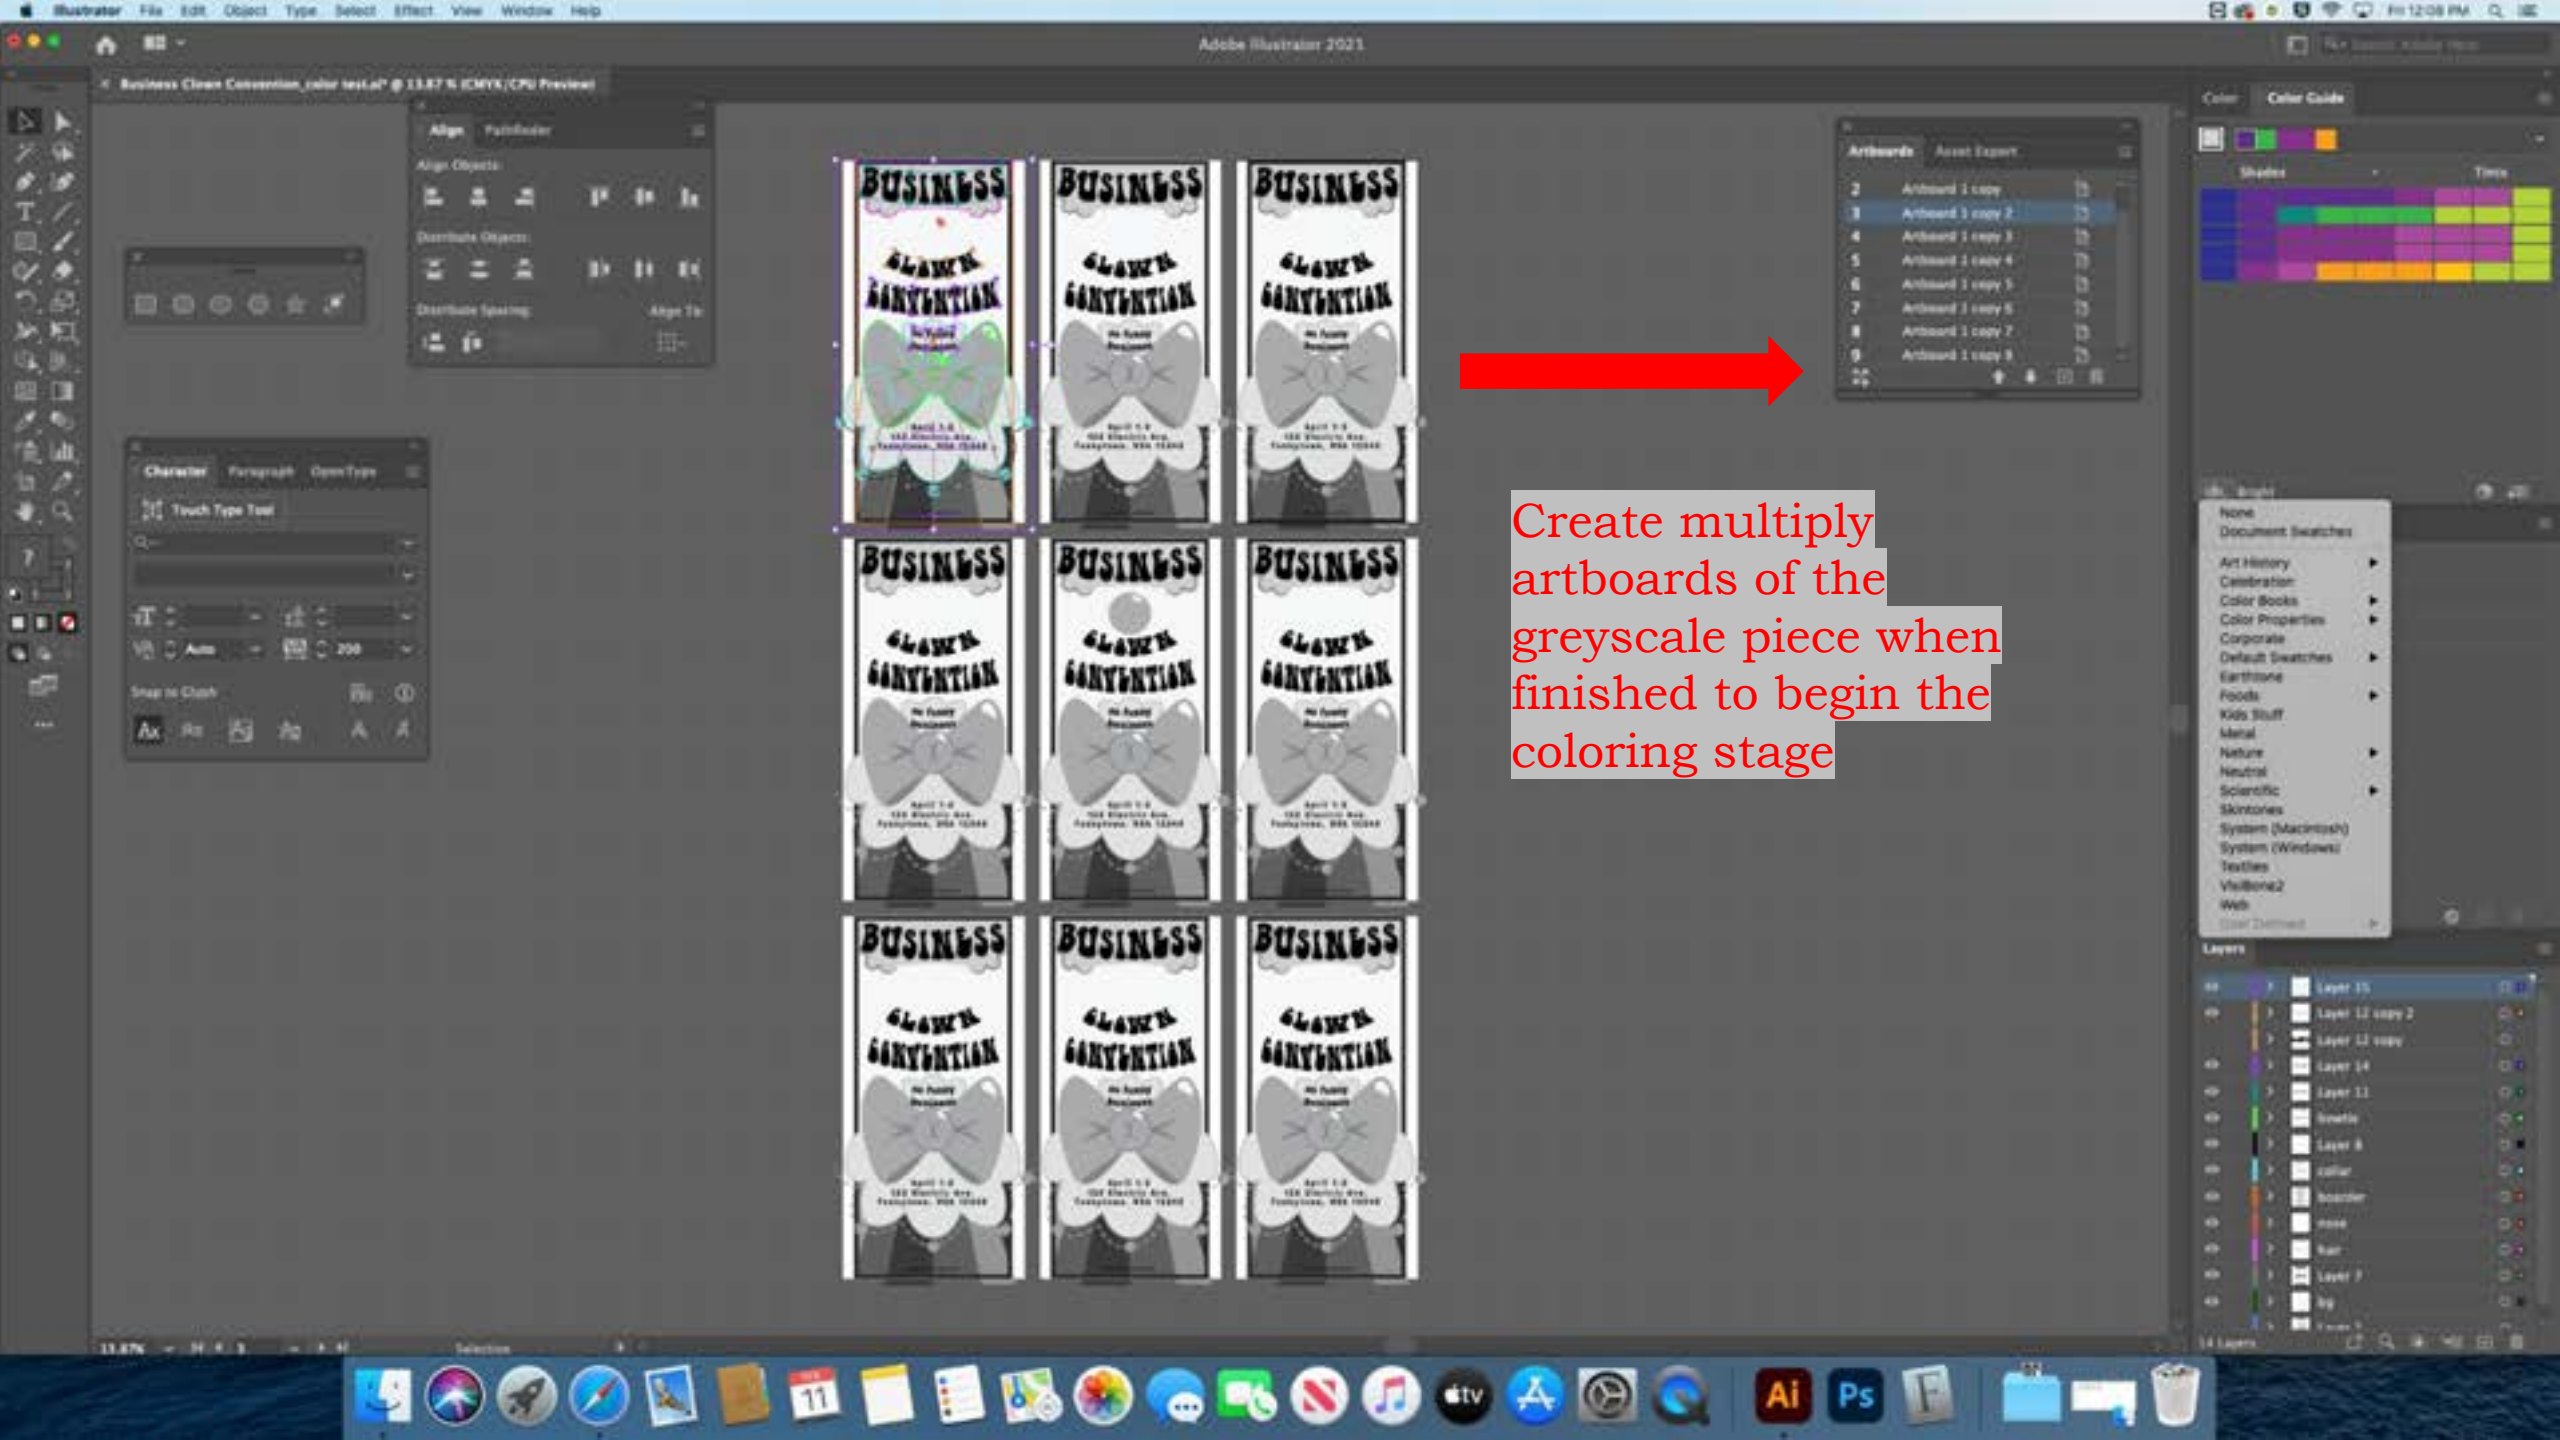

Circle tool to build up the bowtie

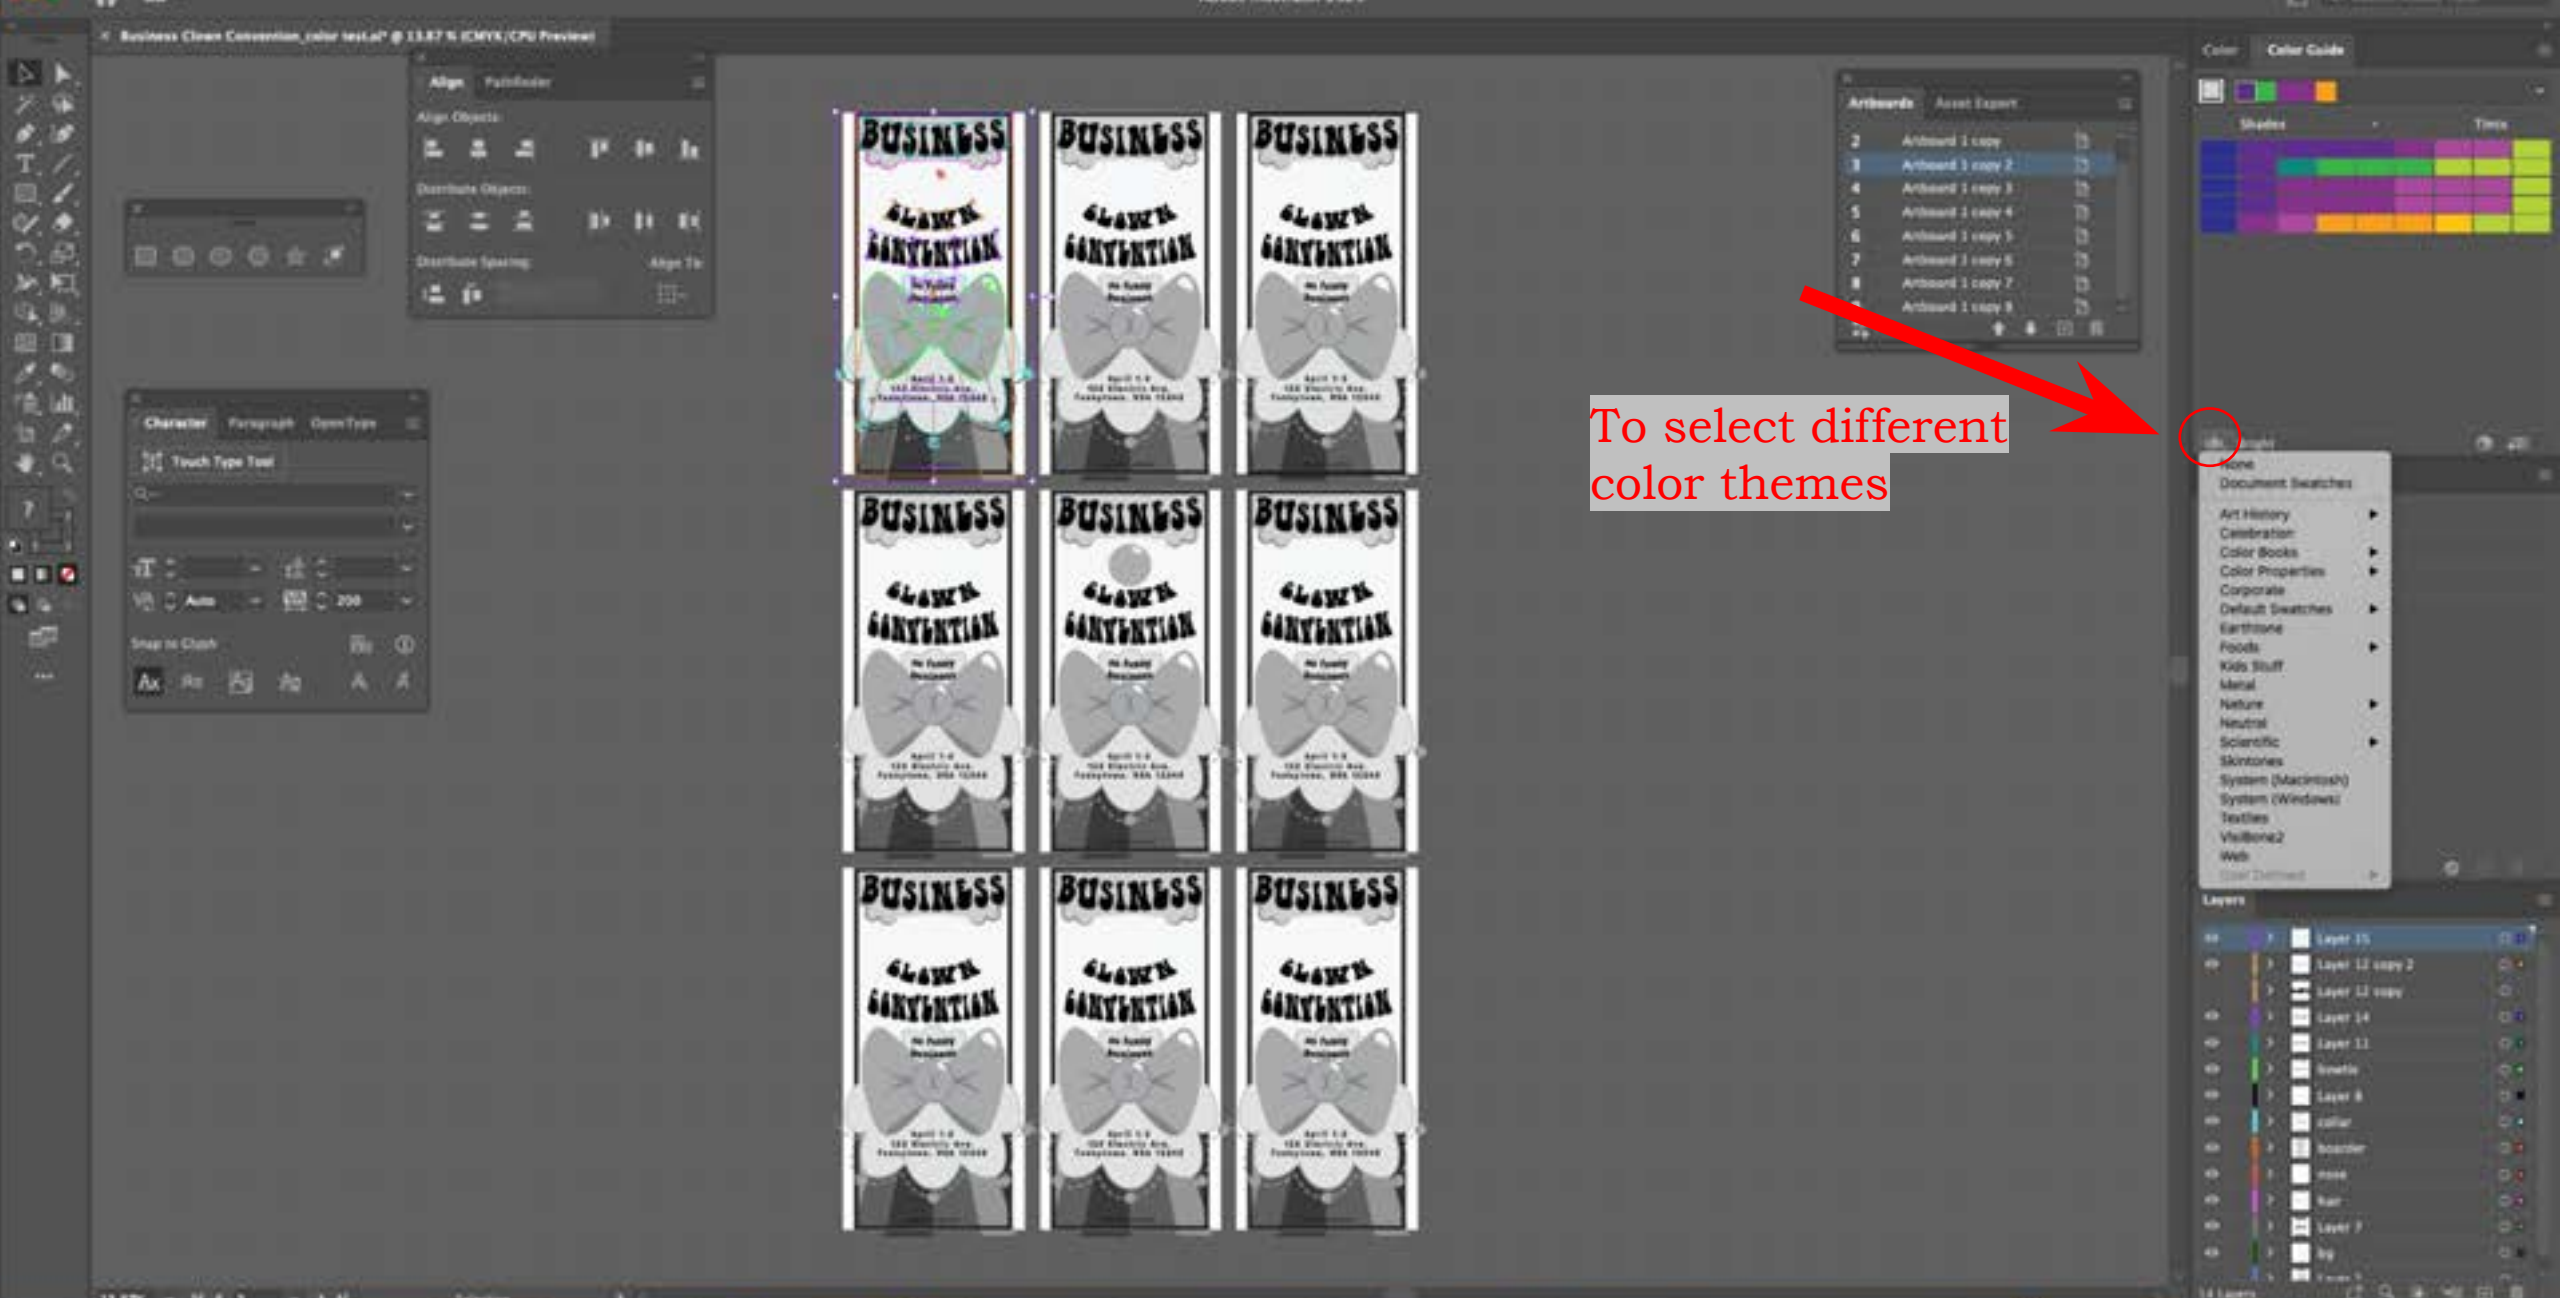

For finer lines and details, I like to use the pen tool to create the shape along with the direct selection tool to morph the shapes

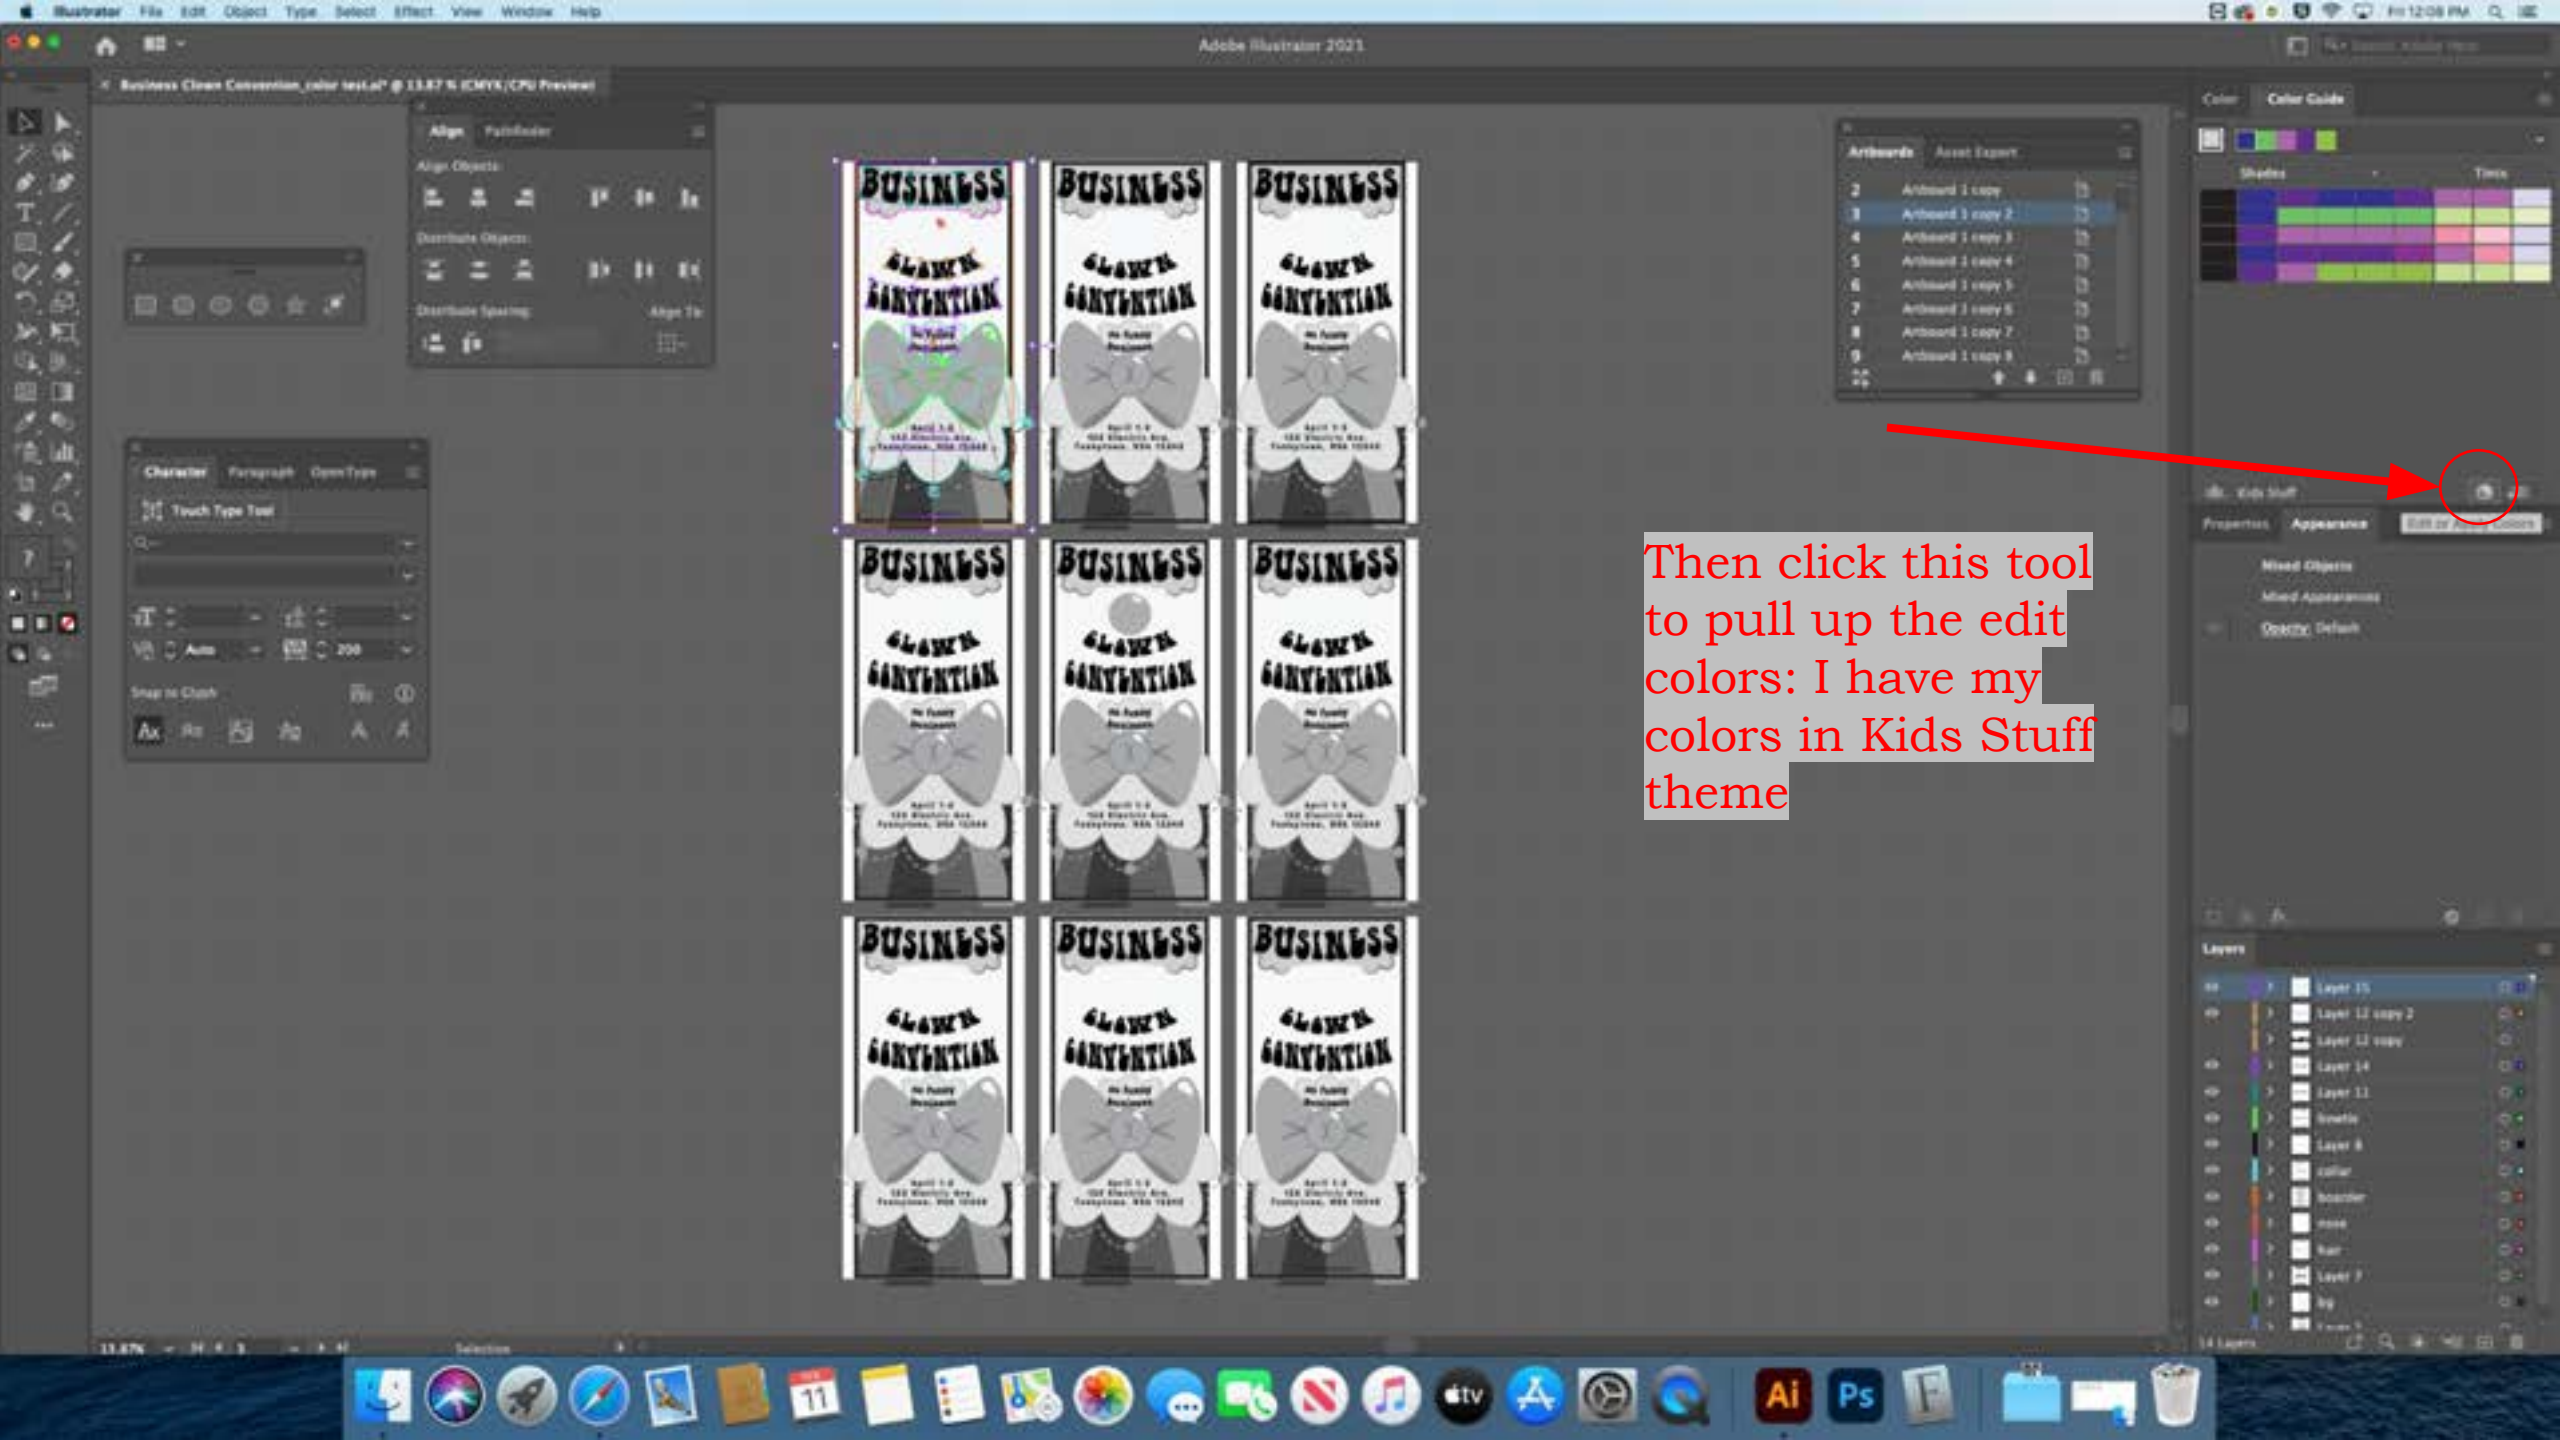

Create multiply artboards of the greyscale piece when finished to begin the coloring stage

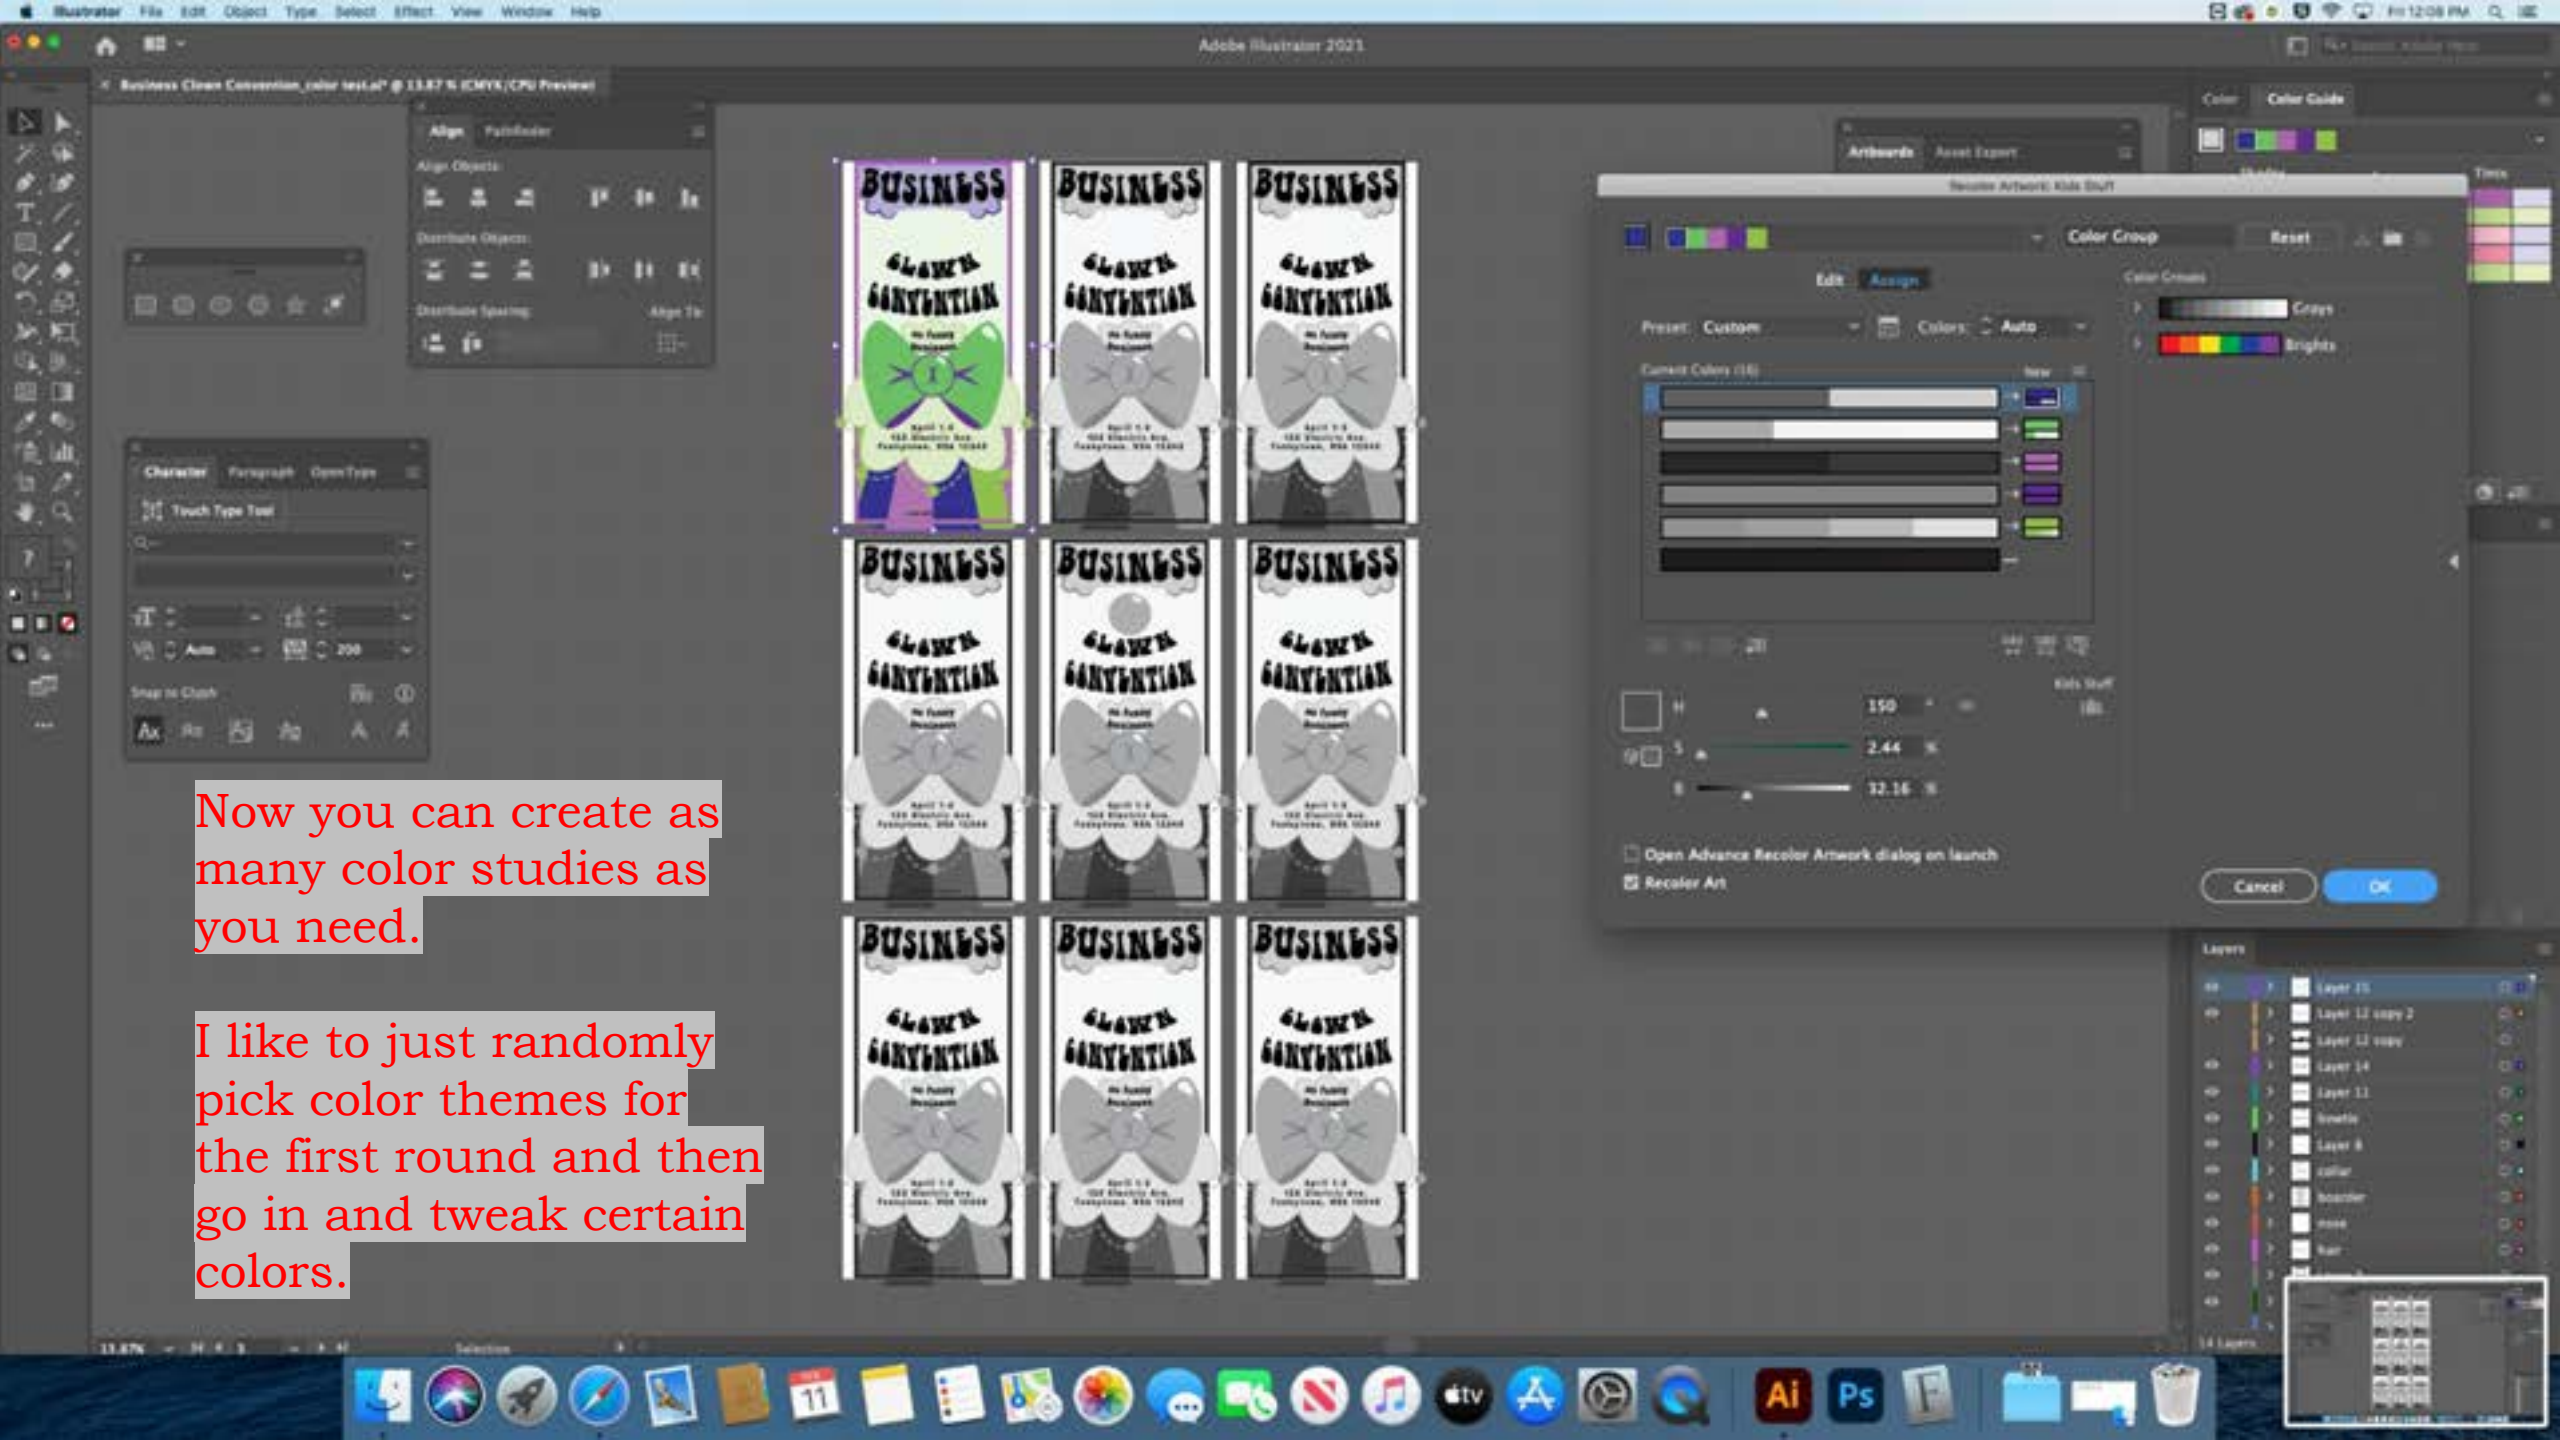

To select different color themes

Then click this tool to pull up the edit colors: I have my colors in Kids Stuff theme

Now you can create as many color studies as you need.

I like to just randomly pick color themes for the first round and then go in and tweak certain colors.

On a new file, I pick the best colors and use it in the final image

At this stage you can start to add in gradients and textures

Here is the final Image
